

Press Release

DeployAI: Official Launch of the European AI-on-Demand Platform

Brussels/Düsseldorf, 24 June 2025 – The new version of the **AI-on-Demand Platform (AloD)** is now officially live. As Europe's central hub for trustworthy AI, the platform offers, for the first time, unified access to more than **500,000 assets** – including datasets, tools, and services for research institutions, businesses, and public-sector organizations. The platform has been developed as part of the **EU-funded projects DeployAI and AI4Europe**, with **active contributions from CONVOTIS**.

As a technology partner, **CONVOTIS contributes its expertise in building and integrating scalable platform solutions**. Working closely with consortium partners, CONVOTIS played a key role in the technical implementation of core infrastructure components – particularly in the areas of **low-code AI development tools, API integration, and platform-based service provisioning**. The goal: to ensure the AloD operates in a **high-performing, secure, and future-proof** manner.

A platform for research, industry, and public sector

The AI-on-Demand Platform addresses two primary areas of application:

- **Research & Innovation:** Access to curated datasets, repositories, metadata catalogs, AI labs, and collaborative development tools.
- **Industry & Operations:** Market-ready services for AI deployment, model training (EuroHPC), hosting, eCommerce marketplaces, and a business navigator for European AI companies.

With this dual architecture, the platform bridges a critical gap between research and commercial application – and contributes significantly to Europe's technological independence.

"The AI-on-Demand Platform is a milestone in Europe's path to digital sovereignty. It brings together the best of research and industry – secure, open, scalable, and built with a European mindset."

– **Joachim Köhler**, Project Coordinator DeployAI (Fraunhofer IAIS)

"Through our platform expertise and solutions for low-code development, API-first architectures, and secure operating environments, we at CONVOTIS are making a tangible contribution to the long-term infrastructure of AloD."

– **José Lopez**, COO CONVOTIS

Strategic relevance for Europe

AloD is a cornerstone of the European AI strategy. It not only increases the visibility and reusability of publicly funded research, but also offers **regulatory-compliant alternatives to non-European cloud and AI platforms**. For CONVOTIS, participation in the DeployAI consortium marks a strategic step in actively shaping **scalable, GDPR-compliant, and interoperable AI infrastructures** for Europe.

About DeployAI

Coordinated by **Fraunhofer IAIS**, DeployAI brings together **28 partners across 13 countries**. The platform is being developed under two EU-funded projects: **DeployAI** (€28M, 2024–2027) and **AI4Europe** (€9M, 2022–2025). The shared goal: to build a **secure, open, and scalable European AI infrastructure**.
